MOSCOW

11 YEARS

THE FIRST PUBLIC AND INDEPENDENT NEWSPAPER IN THE NEW TERRITORIES OF THE CAPITAL OF RUSSIA

IN SEPTEMBER 2023, RESIDENTS OF 13 «TINAO» SETTLEMENTS WILL TO CHOOSE NEW MUNICIPAL DEPUTIES

In September 2023, residents of TINAO will participate in the elections of the mayor of Moscow. 13 settlements of New Moscow will be able to decide on new municipal deputies. The electoral process is expected to last for several days.

On the territory of 13 urban settlements of New Moscow, local residents will choose mundeps in the Shcherbinka urban district, in the settlements: Vnukovskoye; Voskresenskoye; Desenovskoye; Kokoshkino; Marushkinskoye; Moskovsky; Mosrentgen; Sosenskoye; Filimonkovskoye; Kievsky; Novofedorovskoye and Pervomayskoye. «The upcoming elections will be very bright and competitive, as the deputies of the TINAO have real power. Unlike the deputies of the «old» Moscow, they have significant powers to manage municipal property, and the budgets of their municipalities are tens and hundreds

of times larger than those of Moscow and are calculated billions of rubles. Moscow is highly dependent on the territories that surround it. From there we get food and goods, we go there to rest, from there we draw water and get air. This is our land! We urge each of you to think in what capacity he could be useful. As an option, consider for yourself the possibility of participating in elections in one of the municipalities of TINAO,» — this is announced at the Academy of the «Deputy Club», where future candidates for municipal elections in September are already being prepared throughout the capital.

The editorial office of the official district newspaper «TiNAO» of Moscow invites future candidates to dialogue with local residents through our media sources.

OLDER CITIZENS FROM THE MOSCOW LONGEVITY PROJECT WILL TAKE PART IN THE SUMMER PHOTO CONTEST

Outdoor activities, city events, excursions, creative experiments and

much more are waiting for older citizens in the new season of the Moscow Longevity project.

All participants are invited to create their own summer photo chronicle and take part in the #LetoDolgoleta contest.

«Every year during the summer season, most of the Moscow Longevity classes are held outdoors. The project participants dance, sing, draw, play sports in 26 metropolitan parks and at more than 600 outdoor venues, walk through the most beautiful places of the city together with professional guides. This year we invite participants to create a photo chronicle of the city and the summer season «Moscow longevity». From June to August, a contest will be held on the VKontakte social network

#LetoDolgoleta. All interested Muscovites of the older generation can take part. To do this, sign up for classes of the project in the fresh air. We will create a photo archive of our beloved city together,» Vladimir Filippov, Deputy head of the Department of Labor and Social Protection of the Population of Moscow, told the district newspaper TiNAO.

According to the terms of the competition, the participants of the «Moscow Longevity» need to show how they spend their time in the classes of the project. For example, you can take creative photos in a park or against the background of attractions where Muscovites dance, draw, walk with Scandinavian sticks. Then post a post with a photo on the VKontakte social network page with the hashtag #LetoDolgoleta and the mark@mosdolgoletie.

The authors of the best photos will be awarded souvenirs from the Moscow Longevity project every week. Individual and group photos from participants, teachers and suppliers of the project can participate in the competition.

In the summer season of the «Moscow Longevity» for older citizens, in addition to outdoor activities, 30 citywide events will be held – contests, festivals, sports tournaments, creative laboratories, educational lectures, master classes and even the filming of the series.

Within the framework of the regional project «The Older Generation» of the national project «Demography», the project «Moscow Longevity» is being implemented in the capital to increase the period of active longevity and the duration of a healthy life. Women over 55 and men over the age of 60 can become a participant in the project. You can find out the schedule and sign up for classes at the territorial social service center of your district or the offices of public services «My Documents», as well as by filling out a special form on the website in the section «How to become a participant».

We are always glad to see new faces!

THE JOINT EDITORIAL OFFICE OF THE OFFICIAL PRINTED NEWSPAPERS OF THE CITY OF MOSCOW «TINAO» AND «NEW MOSCOW» IS ALWAYS OPEN FOR INTERNSHIPS AS A JOURNALIST AND PHOTOJOURNALIST. INTERNING WITH US, YOU WILL BE ABLE TO ATTEND MANY EVENTS OF THE MOSCOW REGION FOR FREE, PRACTICE WRITING MATERIALS ON VARIOUS TOPICS, LEARN THE BASICS OF JOURNALISM, PHOTO AND VIDEO SHOOTING TOGETHER WITH OUR EXPERIENCED EXPERTS.

FOR OUR PART, WE GUARANTEE MENTORING, FULL SUPPORT OF YOUR ACTIVITIES AND ACCREDITATION. YOU ARE REQUIRED TO BE WILLING TO WORK AND DEVELOP WITH US. IF YOU HAVE ANY QUESTIONS, PLEASE CONTACT US BY EMAIL NEWMOSCOW24@GMAIL.COM

BY SEPTEMBER 2023, IT WILL BE COMPLETED CONSTRUCTION OF 7 SCHOOLS AND 5 KINDERGARTENS, IN TOTAL, THEY WILL GIVE TINAO 4,985 SEATS.

Buy a profitable land plot in New Moscow under the hammer

Land plots for individual housing construction in the Troitsk and Novomoskovsk administrative districts of the capital are constantly put up for city auctions.

The application campaigns are constantly updated. This was reported to the editorial office of the newspaper «TiNAO» the head of the Moscow Department for Competition Policy, which is part of the Complex of Economic Policy and Property and Land Relations of Moscow, Ivan Shcherbakov.

CONSTRUCTION BEGINS IN TINAO NEW RESIDENTIAL COMPLEX «PODOLSK QUARTERS»

A permit has been issued for the construction of the first stage of a new residential complex «Podolsk Quarters» in New Moscow. The project will be implemented in the settlement of Ryazanovskoye, in the village Alkhimovo (NAO).

«The developer has been issued all the permits necessary to start work on the site. Complex buildings due to the low number of storeys of buildings – from 7 to 12 floors – will harmoniously fit into the surrounding landscape, saturated with park areas and museums-reserves. In order to avoid monotony and bulkiness, street facades will be made of facing bricks in contrasting colors, and on the lower floors they will be combined with a single style solution,» the chairman of Mosgosstroy nadzor Igor told the district newspaper TiNAO Voistratenko. The chairman of Moskomstroyinvest explained that the developer of the project is the Airplane group. In addition to housing, social, commercial and engineering infrastructure facilities are provided in the complex. «As part of the first phase, the developer will build four multi-section buildings with one-story extensions for street retail. There are 1,914 designed in them apartments with a total area of 79,100 sq. m. meters,» Anastasia Pyatova noted.

According to the concept of landscaping, the yard space will become safe and a cozy place for a quiet holiday with playgrounds for children,

walking trails and benches surrounded by all-season landscaping. «Simultaneously with the buildings of the first stage, it is planned to put into operation a kindergarten for 200 places,» Anastasia Pyatova added.

The chairman of the metropolitan Supervisory Authority recalled that on behalf of the Mayor of Moscow Sergei Sobyanyin's Committee pays special attention to the quality of construction of residential facilities.

«After the developer sends a notification about the start of construction and installation work, the inspectors of the Committee will draw up a program of inspections. Each stage of the construction of residential buildings in the village of Alkhimovo will be accompanied by control and supervisory measures with the participation of specialists of the subordinate

Center of Expertise (GBU «CEIS»). The experts will conduct a complex of laboratory and instrumental studies to assess the compliance of the quality of the work carried out and the materials used with the requirements of the project documentation,» concluded Igor Voistratenko. The Podolsk Quarters project will be located 15 km from the MKAD in the south direction, in close proximity to another developer's project – Alkhimovo. Residential complexes will connect the main boulevards.

MOOSE IN TINAO ALL DAY POSED FOR A CAMERA TRAP

FOREST REALITY SHOW IN TINAO

The camera of the camera trap captured how an ordinary day of a moose passes.

More often, animals get into the frame at night, so the shooting turns out to be interesting, but not so expressive. It is a great success to observe the behavior of an animal during the day in a natural environment against the backdrop of picturesque landscapes. For example, this moose in TiNAO posed for a camera trap all day. A real forest reality show! We share unique frames.

This was told to the district newspaper TiNAO in the Department of Nature Management and Environmental Protection of the city of Moscow.

For specialists of the Department of Nature Management and Environmental Protection of the city of Moscow, such videos are very useful: thanks to camera traps, they keep records of animals, record even the most secretive forest inhabitants, determine the most successful places for feeding ungulates and laying out rabies vaccines for foxes and other forest predators.

The population of moose exists both outside the MKAD and inside – it is about 12–17 individuals. Moose do not cause people much concern, but a couple of times a year they have special periods in their lives when they go out to people. First of all, it is autumn, the rutting season. At this time, moose move a lot and get on the front pages of newspapers. This is not uncommon, many residents of the east of Moscow are already accustomed to such a neighborhood. Sometimes, out of curiosity and addiction to sharp, unusual smells, grown-up moose calves come to the city.

Moose is a large animal, under 2 meters at the withers, and can cause serious injuries to a person with its powerful front legs. In order not to frighten the animal and thus provoke it to aggression, there is one recipe: do not approach, do not try to stroke, do not take selfies with the moose. If a moose wanders into a busy part of the city, where there is danger for both him and people, then this place is usually cordoned off by the police, specialists come, give the animal a sleeping pill and move it to Moose Island, where the moose wakes up, wakes up and then returns to nature. (the video is available on the newspaper's channel at the link: Youtube.com / NEWMOSCOW)

IN THE AUTUMN OF 2023, A METRO STATION WILL APPEAR FOR THE FIRST TIME NEAR ONE OF THE MOSCOW AIRPORTS

THE OPENING IS EXPECTED THIS FALL METRO STATIONS NEAR VNUKOVO AIRPORT

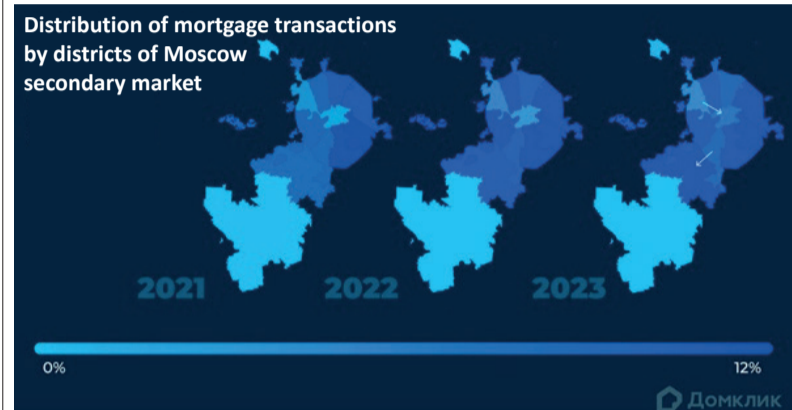

It will be possible to get to the air harbor faster and cheaper. This was announced by State Duma deputy Dmitry Sablin from New Moscow on his website.

«Residents of the district have been waiting for this event for 20 years. The station has been officially named – Vnukovo Airport. The choice was made by the residents of the capital during

the voting of the project «Active Citizen». The station is completely underground, it is integrated directly into the building of the Vnukovo airport complex. From the lobby, it will be possible to exit through an underground passage to Terminal A of the airport, to the Aeroexpress terminal and to the forecourt at the junction of 1st Flight Street,» the message says. As noted by Dmitry Sablin, now the reconstruction of the engineering networks of the station complex has been completed by 91%, the enclosing structures have been fully installed, earthworks have also been completed, the device of the main structures has been completed by 80%, architectural and finishing works of the service area have been completed by 75%, architectural and finishing works of the passenger area have been completed by 79%. The station's decoration is dedicated to the civil aircraft of the Tupolev Design Bureau, whose name the airport bears. The walls will be decorated with thematic illustrations.

THE DISTRICTS OF ZAO AND TINAO ARE THE MOST POPULAR AMONG MORTGAGE BORROWERS

Domclick analysts have studied how the demand for secondary housing has changed in the largest regions of Russia over the past three years.

According to the study, people have become less likely to purchase ready-made apartments for mortgages in regional centers and more often prefer to live in less populated areas of their region.

The outflow from the million-plus cities is associated with the active development of suburban areas, a large number of profitable offers and relatively low prices on the secondary market, the expansion of the transport system and infrastructure development. The pandemic also played a role, when living away from the noise of the city, a remote work format and a favorable environmental situation became additional incentives for moving.

Vyacheslav Tsybulnikov, Vice President of Sberbank - Chairman Moscow Bank shared with the editorial office of the newspaper «TiNAO»: «Analysts have identified two main areas of internal relocation in Moscow. More and more people are moving to the Central Administrative District. The share of apartments purchased with a mortgage in CAO, increased by 3 percentage points. This is due to significant discounts on real estate in the center of the capital in 2022.

Muscovites are also moving beyond the MKAD. The share of mortgages on the «secondary» in the Novomoskovskiy administrative district increased by 1.6 percentage points. One of the motives for the move is the construction of new kindergartens, schools, polyclinics and metro stations in the NAO.»

Domclick analysts investigated the change in the share of mortgage transactions for the purchase of ready-made housing in Moscow districts from 2021 to 2023. The share of transactions in the district was measured as the number of mortgage transactions in the district divided by the total number of mortgage transactions in the capital. As a result, maps were prepared showing the demand for housing on the periphery and in the centerMoscow.

RESIDENTIAL COMPLEX «RUMYANTSEVO-PARK» IS FULLY IMPLEMENTED

Residential complex «Rumyantsevo-Park», which was built in Moscow, Moskovsky settlement, 30 Rodnikovaya Street, buildings 1-3, fully implemented. About this Developer – company Lexion Development shared with the editorial office of the district newspaperTiNAO.

All three houses in the complex have been put into operation, the keys have been handed over to residents. The last residential building – House D3 was commissioned in November last year, and the transfer of keys to residents was completed in March 2023.

Rumyantsevo Park is the first business-class residential complex in the territory of New Moscow, located near the metro station Salarievo, Sokolnicheskaya metro line. The complex consists of three monolithic houses of variable number of storeys from 13 to 22 floors for a total of 4246 apartments. There is a non-standard author's architecture, underground heated two-level Parking, the concept of «yard without cars», closed and guarded territory. The total area of the plot is 16.6 hectares, the built-up area is 386,340 sq. m, of which theresidential area is 22,008 sq. m.

«NEW MOSCOW» TERRITORIES ATTACHED TO THE CAPITAL DURING THE A LARGE-SCALE PROJECT TO EXPAND THE TERRITORY OF MOSCOW IN THE WHOLE HISTORY ADMINISTRATIVE-TERRITORIAL DIVISION OF THE CITY

On July 1, 2023, Novomoskovskiy and Troitskiy administrative districts will be 11 years old. Even new districts are called «TiNAO» because of the unified prefecture.

The expansion of the administrative borders of Moscow at the expense of the territory of the Moscow region has increased the size of the capital by about 2.4 times. Due to this, Moscow rose from 11th to 6th place in the ranking of the largest cities in the world by area and became the largest city by area in Europe. At the same time, the city retained the 7th place in terms of population, since less than 250,000 people lived in the annexed territories, today about 700,000 thousand.

The editorial office of our newspaper congratulates all residents of the capital on this holiday! Let everyone feel only good from our boundless borders of the city of Moscow.

Ducklings, hares, squirrels: specialists of the Department of Nature Management and Environmental Protection told the district newspaper «TiNAO» how to properly help chicks and cubs of animals.

In spring and summer, Muscovites often turn to the city's hotline with a request to help chicks or cubs of animals. Experts told us in which cases it is necessary, and when good intentions can harm nature.

Now in natural, park territories, and even among residential buildings, Muscovites often find chicks and cubs of animals. Concerned townspeople ask if everything is all right with the kids: suddenly they are lost, their parents have abandoned them, do I need to feed the cubs or take them to a rehabilitation center? These questions were answered by experts Department of Nature Management and Environmental Protection of the City of Moscow.

The appearance of young animals is associated with the beginning of the brood-nesting period, which occurs with the onset of spring and the timing may vary depending on current conditions.

The first of the capital's birds make the oviposition of an owl: an obscure gray and eared owl. If puffer chicks are found, you can try to return them to the nest or at least transplant them to the upper tier of the tree near the nest. You can watch the owlets from afar. Most likely, the parents are nearby and feed them, but if the chicks are really left alone, then you should seek help from ornithologists.

The same can be said about daytime birds of prey of the hawk and falcon families, but at a later stage of development – at the stage of fledglings, that is, chicks who take the «first steps», or rather flaps, flights.

Almost all types of nocturnal and diurnal birds of prey are listed in the Red Book of the city of Moscow and are under its protection. You can't just take them home as a pet, you need expert advice! Such chicks, even if they are orphaned, professionals will be able to raise and then return to nature

With the warming and the appearance of insects, the brood-nesting period is activated in other species of birds, which can be attributed to the conditional group of small herbivores, insectivores and songbirds. If such ingots are found, in no case should you take them in your hands, carry them somewhere. In most cases, parents take care of the chicks, it is necessary to leave the babies at the place of detection.

The only thing that can be done is to take the chick

away from the path or road, if it is sitting right on it, and transplant it to a tree. If a nest is seen nearby, then you can place a nestling in it or on a branch nearby. If the chick does not stay on the branches, then it is enough to leave it on the ground. Parents will definitely find him visually or by voice and will feed him.

In a separate group, waterfowl can be distinguished, which in our region is widely represented by the duck family, namely mallard ducks and ogars.

These species in most cases hatch chicks on land, outside of reservoirs, and then the grown-up ducklings are «marched» to the water, confusing not only passers-by, but also motorists.

If you have witnessed such a situation, you should not frighten and catch birds, you need to organize the suspension of automobile traffic with signs and ensure the unhindered passage of the brood to its destination.

If ducklings are found in a pond, even without a mother duck, you should also not catch them, take them away, or take other active actions. Downy ducklings are able to survive independently in the reservoir due to the absence of natural enemies, feeding on plankton, leaching it with their beak from the water column. Some duck species, especially ogari, not finding safe or suitable nesting sites in the city limits, make egg-laying on roofs and of buildings and various objects. Barely grown-up down jackets boldly plan down even from multi-storey buildings, because their

down cover and light weight ensure a successful landing, after which the mother duck transfers the brood to a nearby pond. It is impossible not to mention the fins and haircuts.

These species in our region are typical representatives of urban fauna, but at the same time they do not depend on people in any way.

There is absolutely no need for a person to invade the life of these species, you can only help them by protecting their nests. Occasionally, swallow chicks fall out of the nest, in which case, if possible, you can try to return them to the nest or put them on some kind of «prisad», where parents will be able to feed the chick until it is «put on the wing».

Young or weakened individuals of swifts may inadvertently land on the ground, from where, due to excessively long wings, they will not be able to take off later. Here, assistance is reduced to a banal «tossing» up: if the bird is OK, it will immediately fly. Weakened individuals can be planted on a «prisade», a stick, etc., available at hand, from where the bird can continue its flight after rest.

In no case should the chicks be removed from the nest unreasonably or for far-fetched reasons, taken from their parents or simply from the natural territory and taken home, transferred to third parties for maintenance or for other purposes. Such actions are not humane, not legal and are a violation of environmental legislation.

In addition to representatives of the bird class in natural and park areas, up to residential development, you can find young small animals: hares and squirrels. When detecting cubs of these species, it should be remembered that they begin to feed themselves with natural feeds at the age of two weeks. Hares and squirrels in case of danger are not yet able to move quickly and therefore prefer to «hide», freeze in place, not realizing that they are detected, and in this situation they are often not even able to bite, being in the hands of a person, maintaining a state of «inhibition».

You should not take such animals in your hands, take them somewhere and transfer them to someone, much less remove them from their natural habitat. You need to leave everything as it is, the animals grow up quickly, gain strength, skills, and in a few days you will be able to admire a young and strong animal, although it will not be possible to catch it. If a wild animal needs help, you need to call the city's hotline +7 (495) 77 7-77-77.

Specialists will tell you how to do the right thing, if necessary, they will arrive at the place and take the necessary measures.

IN TOTAL, BY 2035, WE WILL BUILD ABOUT 320 KINDERGARTENS AND 170 SCHOOLS IN TINAO AND 125 HEALTHCARE FACILITIES

NEW MOSCOW IS BEING RECONSTRUCTED PHARMACEUTICAL PLANT

A permit has been issued for the reconstruction of the building of the existing pharmaceutical plant «Izvarino Pharma». This was reported to the editorial office of the newspaper NEW MOSCOW by the Deputy Mayor of Moscow in the Moscow Government on Urban Planning policy and construction Andrey Bochkarev. The object is located in the settlement of Vnukovo at the address: 5th km of Vnukovo highway, land plot 1.

«The plant was opened back in 1998 and became one of the first pharmaceutical enterprises in Russia that fully complied with international standards for the production of medicines (GMP). At the moment, the company has decided to reconstruct the existing building to increase production capacity,» Andrei Bochkarev said.

According to the Deputy Mayor, as part of the reconstruction, the area of the two-storey complex will increase by 1.5 thousand square meters, two new extensions will appear. One of them will house office space, a laboratory area, changing rooms, an archive and places to relax. The production and packaging area will also be expanded with a new

workshop. There will also be offices for employees, meal rooms, a dressing room and recreation.

«The capital region is one of the flagships of the Russian medical industry. A number of large pharmaceutical enterprises are located on the territory of the city. The renewal of the production complex in the settlement of Vnukovskoye will not only expand the line of manufactured medicines, but also create additional jobs for residents of Moscow,» he explained Andrey Bochkarev.

On the territory adjacent to the pharmaceutical enterprise, roadways will be organized, sidewalks will be paved, and landscaping works will be carried out.

As noted by the chairman of Mosgosstroynadzor Igor Voistratenko, the developer has received all the necessary permits to start construction work.

«Construction at all stages will be supervised by the Committee. After receiving the notification of the start of work, we will draw up an individual inspection program for the object. Specialists of the subordinate Center of Expertise (GBU «CEIS») will be involved in them, who will perform a complex of laboratory and instrumental studies on the quality of work and materials used,» he stressed Igor Voistratenko.

AN UNDERSTUDY OF THE MOSCOW RING ROAD IN NEW MOSCOW. The Solntsevo - Butovo - Varshavskoye Highway will be finally built in 2026

This has been repeatedly stated in the media by Andrei Bochkarev, Deputy Mayor of Moscow in the government of the capital on urban planning policy and construction. The new highway will duplicate the southern and southwestern parts of the MKAD on the territory of the Troitsk and Novomoskovsky administrative districts. To date, this road is two-thirds ready. Two plots are under construction. Three more segments — from Kiev to Kaluga highway, from Kaluga highway to TPU Stolbovo, from Borovsky to Kiev highway — are already ready, — said Andrei Bochkarev. According to Bochkarev, the last 14-kilometer section of the highway from Polyana Street to the Warsaw Highway will be the most difficult on the highway. Its construction began recently. In total, more than 30 kilometers of roads are planned to be created in New Moscow in 2023.

IN THE RYAZAN SETTLEMENT TINAO WILL OPEN NEW KINDERGARTEN

A new kindergarten as part of the residential complex «Alkhimovo» has received permission to enter.

Externally, the object resembles a children's constructor.

The building is located at the address: Ryazanovskoye settlement, Utochkina str., 6 (NAO). The opening of the kindergarten is planned by September of this year.

«The Committee's specialists have issued all the necessary permits for the commissioning of the facility. The kindergarten is designed for 275 places. The total area of the building is more than 3,730 sq. m. meters. For each group, there is a block of rooms with a game room, a bedroom, a pantry and a locker room, which are equipped with safe children's furniture,» he told the newspaper TiNAO Chairman of Mosgosstroyadzor Igor Voistratenko.

«The Airplane Group has commissioned the first kindergarten in the Alkhimovo residential complex. It is designed for the simultaneous stay of 11 groups of children. Now the developer is transferring the kindergarten to the city. In addition, the investor plans to build and transfer to the balance of the city a school for 1,200 students and two kindergartens for 200 and 250 places», — Anastasia Pyatova, the chairman of Moskomstroyinvest, told the newspaper NEW MOSCOW.

The kindergarten is built according to an individual project: the chaotic arrangement of windows of different sizes and their multicolored framing gives the facades dynamics. Thanks to the stained glass windows, the kindergarten premises will also be filled with plenty of natural light.

In addition to group rooms with games rooms and bedrooms, the building provides music and physical education halls, club rooms, speech therapist's offices, a psychologist and a full-cycle food hall. Each kindergarten room is equipped with furniture and necessary equipment

Several functional zones have been created on the fenced territory: a sports area with two sports grounds, a utility area and a walking area. The latter includes four playgrounds with play complexes and shade canopies. There is a place for storing strollers near the central entrance group. Landscaping has been carried out on the space free from sidewalks and pedestrian paths.

The kindergarten is adapted for the access of low-mobility groups of citizens. Pedestrian paths with low curbs have an anti-slip coating

Announcement of the events of the Moscow longevity Center «Shchapovo»

в период с 01.07.2023 по 31.08.2023

ON JULY 08

a festive program dedicated to the Day of Family, Love and Fidelity with a tea party.

JULY 12

Sandwich day (master class with tasting)

the festive program «Honey Savior» with tasting

ON AUGUST 18

the festive program «Apple Savior» with tasting

ON AUGUST 22

the festive program «The Day of the National Flag of Russia» with a tea party

ON AUGUST 29

the festive program «Nut Spas» with tasting

The Moscow Longevity Center «Shchapovo»

is waiting for you daily from 10.00 to 20.00

without breaks and weekends at the address:

58 Shchapovskoye settlement, Shchapovo

settlement, Moscow.

Classes in clubs: sports. Creative, decorative and applied, visual, developmental, etc., are held according to the schedule

TWO BUILDINGS FOR 478 APARTMENTS WILL BE BUILT AS PART OF RESIDENTIAL COMPLEX «FIRST MOSCOW» ON THE TERRITORY OF TINAO

A permit has been issued for the construction of two buildings of the residential complex «First Moscow» in the Novomoskovskiy administrative district. The objects will be located in the settlement of Moskovsky at: plots of the greenhouse complex No. 1, third microdistrict, block 3.

«The developer plans to erect two-section and three-section buildings, the total area of which will be 31,300 sq. m. meters. Monolithic construction technology with the use of a system of ventilated facades will be used. 478 apartments with different layouts are provided for future residents, « Igor Mosgosstroyadzor Chairman told the newspaper NOVAYA MOSCOW Voistratenko

MUSIC FOR TINAO

Thanks to the project «Route to Longevity», at the weekend the residents of Shcherbinka met the Zavalinka music and theater club from the Desenevsky Children's Music Center — the winner of the I degree of the annual city music competition «The Secret of Two Hearts». Very soulful songs penetrated into every corner of the hall and the entire center! Everyone sang and danced together to well-known and favorite songs. The love of music on this day united and made friends with visitors and guests of the center.

The Zavalinka Music and Theater Club is happy to take part in city vocal competitions and inter-district events. The collective has existed since the opening of the Moscow Longevity Center

«Desenevsky» and to win the love of the audience from the entire Trinity and Novomoskovsky administrative district! We wish the vocal ensemble «Zavalinka» good health, creative longevity, full houses and new glorious victories!

We are waiting for you from 10:00 to 20:00, seven days a week at the address: Moscow, Desenevskoye settlement, Dmitry Kabalevsky str., 16A.

THE VOICE OF NEW MOSCOW

At the end of May 2023, civil activists and members of the «Deputy Academy» gathered in TiNAO at the «Voice of New Moscow» forum. The event took place on the site of one of the boarding houses of the Trinity and Novomoskovsky districts.

The forum was timed to coincide with the upcoming municipal elections in TiNAO and was accompanied by a live broadcast on social networks. His program included educational electives, business games and district analytics from experienced political strategists.

A round table dedicated to the topic of the elections to the Moscow City Duma in 2024 was also organized separately.

«The purpose of the event is to attract civil society to participate in electoral processes, overcome the bureaucratic machine from the registration stage to the voting day, and train activists in election victory technologies,» the organizers of the forum told the district newspaper TiNAO.

AT THE REQUEST OF RESIDENTS, AIR QUALITY MEASUREMENTS WERE CARRIED OUT IN TINAO

In Moscow, every resident has the opportunity to report unpleasant odors or air pollution to the Department of Environmental Management. Not a single signal from the citizens remains without attention: the State Budgetary Institution «Mosekomonitring» regularly conducts environmental surveys of the territories indicated in the applications. For these purposes, three mobile environmental laboratories function as part of the Moscow environmental monitoring system. This was reported to the editorial office of the newspaper «NEW MOSCOW» by representatives of the Department of Nature Management and Environmental Protection. In each territory, sampling was carried out at several points - at the addresses from which residents' complaints were received. In addition to automatic measurements, air samples are manually taken on site for subsequent analysis for more than 120 pollutants

In TiNAO, Troitsk and the settlement of Sosenskoye were checked. The results of the mobile laboratory raids, as well as the conducted sample analysis, are available on the website of the Open Government of Moscow Portal at data.mos.ru
